## NovaMax® : Next Generation Slide-Plate Forming System

### Pivoting Product Hopper and Servo Feed Screw

A pivoting hopper and easily removable feedscrews are among the features that make the NovaMax quick and easy to clean. Innovative features result in reduced downtime, lower maintenance costs and increased productivity.

### Servo Controlled Dual Lobe Pump

The NovaMax servo controlled dual lobe pump not only provides precise filling capability but also ensures that product is not overworked and damaged in the pumping process. Because the system is fully enclosed, it has the added benefit of virtually eliminating product leakage.

### Direct Drive Servo

By minimizing mechanical linkages, the NovaMax advanced servo technology improves reliability and uptime resulting in a significantly lower cost of ownership.

### Touch Screen Interface

NovaMax introduces a next generation 381mm (15 inches) touch screen interface that is easy to use. Operators can choose from a full range of operating and diagnostic screens in multiple languages and make adjustments to key parameters on the run.

### One-Piece Pump Box

NovaMax incorporates a one-piece pump box that provides a true running surface for precise tooling alignment resulting in reduced mold plate drive loads and reduced product leakage.

### Servo Knock-Out Drive

Precise product placement to downstream conveying systems is provided by programmable knock-out motion profiles powered by advanced servo drives. It optimizes performance and works in sync with conveyors on a product by product basis.
